

What stage of energy management are you at?

Energy savvy - I have installed on-site renewable energy generation

You keep your finger on the pulse when it comes to investment opportunities and you have already taken advantage of the generous returns offered from the Feed in Tariff and / or Renewable Heat Incentive. You have seen a nice steady income from the subsidies but do you know how well your system is performing?

What we recommend:

- We will monitor and maintain your existing renewable energy system
- We will conduct in-depth analyses of your energy usage and generation before creating a unique strategy
- We will monitor and validate your energy data
- We will validate your energy bills (including FIT / RHI submissions) and procure better rates on your behalf
- We will offer unbiased advice and expert guidance about energy management
- We will recommend the most effective combination of cutting-edge technologies that are guaranteed to deliver further savings and revenue

What will I achieve?

Our Total Care operation & maintenance service will ensure your renewable energy system continues to generate the yield and revenue you are expecting, while our automated FIT submissions and validation will ensure you never miss a payment.

In addition, we will create a unique Energy Management System (EnMS) for your organisation, drawing energy data from a range of sources to carefully analyse your energy usage and the impact of your existing renewable energy system before making recommendations for further improvements. Trust us to look after your energy and we will guarantee to deliver savings year on year, whilst ensuring your carbon savings go above and beyond the minimum standards for current and impending legislation.

We will look after every aspect of your energy...
